

## Field service technician

As a field service technician at MJ-Tech you work in a young and dynamic company where you are prepared for projects and service work in the field. With our company, we design, manufacture and do the installations necessary for cooling and humidifying greenhouses all over the world. As a field service technician, you ensure the commissioning of our installations at the clients facility. In the execution of assignments you work in a team and you receive guidance on the projects from the project leader.

### What do we ask of you?

As a field service technician you need to be technically skilled and mechanically inclined. In addition, you have:

- at least 2 years of work experience in installation technology (water and electrical);
- good command of the English language;
- a G driving license;
- fork lift & skyjack experience;

Our ideal new colleague is quality-conscious, has a pleasant social character and is willing to sometimes go the extra mile with our team if a project requires it.

### What do we offer you?

We are an ambitious and fast-growing company that likes to enable you to work with modern tools and techniques. In addition, you can count on the following:

- a full-time job (38 hours) with attractive working conditions;
- a company vehicle;
- the possibility to carry out international projects;
- you will work in an organization where there is room for your own input and personal growth. We are very willing to help you further develop your knowledge and skills.
